

PG LIFE LINK Introduces LIM-CONNECT™ SOFTWARE

September 26, 2008

Finally, there is an easy way to remotely monitor and control every Line Isolation Monitor in your facility from any network accessible PC. **PG LIFE LINK'S** new **LIM-CONNECT™ SOFTWARE** <http://www.pglifelink.com/line.htm> complements the advanced features of the **MARK V LINE ISOLATION MONITOR** and provides true connectivity over your facility's standard Ethernet network infrastructure. **LIM-CONNECT™** provides a flexible and scalable solution for managing, monitoring, configuring, troubleshooting, controlling, testing, and collecting historical performance data, throughout your facility's entire installation of isolated power systems, from your own desktop.

LIM-CONNECT™ overview screens simultaneously display status of each LIM within the defined area and highlight any abnormal status. Detail screen view provides full real-time emulation of **MARK V** status displays, alarms, settings, and logs.

LIM-CONNECT™ can be configured for automatic downloading of LIM event logs to any network storage location at any time, and a programmed time each day. Log files are compatible with typical text editor, spreadsheet, and database applications.

An automatic clock synchronization feature ensures that all LIMs are set for the same date and time so that logging is consistent.

Data can be communicated over a facility's existing wired Ethernet network, or on its own separate "private" network segment. Optional Wi-Fi hardware is also available.
