

PG LifeLink Isolated Power Systems – A More Economical Choice

With over 54 years in the healthcare market **PG LifeLink** is a recognized innovator of Isolated Power Systems and Accessories. Their products lead the industry with high quality, functionality and durability. The most recent innovations have been geared toward making the addition of isolated power a more economical choice by reducing installation and maintenance costs.

PG LifeLink Isolated Power Systems arrive in three easy to install pieces. The back box arrives when requested, allowing you to meet the wall completion schedule. The interior arrives as the electrical installation nears completion. Pre-positioned studs in the back box make the single-piece chassis placement simple and wiring terminations are completed following the installation guidelines. The third and final piece is the stainless steel front.

All **PG LifeLink** panel fronts are hinged. Standardizing the hinged front panel has added to the ease of installation and dramatically reduces the time and strain of yearly maintenance. Not only does this save time and money, hinged front panels don't require heaving lifting, therefore, reducing potential injury.

PG LifeLink Isolated Power Panel hinged front panels and three-piece assembly are preferred by electrical contractors for ease of installation and dependability. Contact **PG LifeLink** at **800-287-4123** to discuss your specific needs or visit their website at www.pglifelink.com.
